

SOUL'S ACCESS PLATINUM SHDSL

Product Overview

Soul has an extensive broadband network covering thousands of exchanges across Australia. Unlike other broadband offerings, Soul's Access SHDSL product has been purpose built to carry Business grade traffic and is available for Internet and Private Network solutions. Soul is a leader in providing proven retail based solutions using SHDSL technology.

Soul's SHDSL is symmetrical (same speed upstream as downstream), shared SHDSL service. This product is ideal for Business-Grade Data services.

Simplicity of Configuration

One of the great benefits of Soul's IP VPNs using Access SHDSL when compared with circuit based WAN's such as Frame Relay is the simplicity of router configuration. You simply attach a site to your VPN and it learns all the routes to all other sites. Additional benefits include the reduction of port and tail access size at what would have been hub sites in a traditional Hub and Spoke WAN.

When migrating from a Frame Relay WAN you can expect immediate savings through bandwidth reduction by eliminating traffic tromboning at hub sites. Greater cost savings and performance increases are available as you tune your WAN for optimal performance.

SOUL'S ACCESS PLATINUM SHDSL

Quick Facts

- Business Grade - Voice capable
- Speeds up to 4Mbps
- Available Metro, Regional and Remote areas

Applications

- Fast Internet
- Mission critical data applications
- Voice carriage

Interface Information

Customer Interface - Physical

SHDSL (Ethernet may be required at certain locations)

Customer Interface - Logical

IP over ATM

Soul Interface

ATM PVC over STM-1
